Summarising biometrics from the SAFRING database for southern African birds

Rose, Thomson, Oschadleus and Lee

Table S1: Summary of available biometric data for 674 bird species in the SAFRING database, extracted between July–November 2018. ADU number = number assigned by the Animal Demography Unit at the University of Cape Town, South Africa; *N* = total number of ringing and retrap records in the database per species; *n* = number remaining after data cleaning and validation, *lq* = lower quartile, *uq* = upper quartile. Biometrics included were: mass (g), wing length (mm), tarsus length (mm), culmen length (mm), tail length (mm) and head length (mm). Sex-specific size differences were noted as ‘Yes’ or ‘Unknown’ and are further summarised in Table S3.

Summarising biometrics from the SAFRING database for southern African birds

Rose, Thomson, Oschadleus and Lee

Table S2: Subset of 70 southern African bird species for which there was insufficient ringing and retrap records in the SAFRING database to yield biometric summaries. These species are highlighted because several are either endemic or relatively common and could therefore be important candidates for future research. ADU number = number assigned by the Animal Demography Unit at the University of Cape Town, South Africa. Mass (g) = mean value of weights entered in the database.

Summarising biometrics from the SAFRING database for southern African birds

Rose, Thomson, Oschadleus and Lee

Table S3: Summary of sex-specific biometrics for bird species in the SAFRING database, extracted between July and November 2018, showing mean values of measures of: mass (g), tail length (mm) and wing length (mm). ADU number = number assigned by the Animal Demography Unit at the University of Cape Town, South Africa. Sex 1 = male; 2 = female. However, the codes for sex entered by the bird ringers could not be cross-validated, thus not all significant differences are biologically significant, but should be further evaluated at the species level.
