

FIFTEENTH RINGING REPORT

C. C. H. ELLIOTT & M. J. F. JARVIS

Continued from *Ostrich* 43(4), December 1972

SCHEDULE OF BIRDS RECOVERED

| Ring No. | Ring Location | Co-ordinates | Age | Ring Date | Recovery Date | Recovery Location | Co-ordinates | Distance and Direction | Time elapsed | code | Other details |
|--|---------------|--------------|-----|-----------|---------------|--|--------------|------------------------|--------------|------|-----------------------|
| 2: Jackass Penguin <i>Spheniscus demersus</i> | | | | | | | | | | | |
| Walvis Bay S.W.A. | 22 59 S | 14 31 E | | | | Walvis Bay, S.W.A. | 22 59 S | 14 31 E | 45km N | 0 | X |
| G-00035 | Ad. | 8.6.70 | | 6.70 | | Walvis Bay, S.W.A. | 22 59 S | 14 31 E | 45km N | 0 | X |
| G-00037 | Juv. | 24.6.70 | | 28.6.70 | | | | | | | |
| 6: Cape Dabchick <i>Podiceps cristatus</i> | | | | | | | | | | | |
| Rondevlei, Retreat, Cape | 34 05 S | 18 30 E | | | | Rondevlei, Retreat, Cape | 34 05 S | 18 30 E | 0 | 0 | (?) |
| 6-00258 | Juv. | 31.1.70 | | 4.2.70 | | | | | | | |
| 7: Wandering Albatross <i>Diomedea exulans</i> | | | | | | | | | | | |
| Marion Island, Indian Ocean | 46 35 S | 37 56 E | | | | Marion Island, Indian Ocean | 46 35 S | 37 56 E | 0 | 144 | = |
| 508-0369 | Pull. | 13.1.54 | | 29.12.65 | | | | | | | |
| This recovery is not as unlikely as it sounds. The Shy Albatross is the commonest albatross off the East Coast most of the year and 40 have been caught from trawlers. | | | | | | | | | | | |
| St. Lucia Estuary, Zululand, Natal | 28 22 S | 32 25 E | | | | St. Lucia Estuary, Zululand, Natal | 28 22 S | 32 25 E | 290km SW | 0 | V |
| 7-00208 | Ad. | 7.4.69 | | 21.4.69 | | Scottburgh, South Coast, Natal | 30 19 S | 30 40 E | 290km SW | 0 | V |
| Plettenberg Bay, Cape | 34 04 S | 23 22 E | | | | Off Elands River Mouth, Cape | 34 03 S | 24 5 E | 135km E | 95 | + |
| C-2730 | Ad. | 5.9.62 | | 29.6.70 | | | | | | | Caught in trawler net |
| 11: Shy Albatross <i>D. cauta</i> | | | | | | | | | | | |
| This recovery is not as unlikely as it sounds. The Shy Albatross is the commonest albatross off the East Coast most of the year and 40 have been caught from trawlers. | | | | | | | | | | | |
| 23: Cape Hen <i>Procellaria aequinoctialis</i> | | | | | | | | | | | |
| Nightingale Island, Tristan da Cunha Group | 37 24 S | 12 28 W | | | | Nightingale Island, Tristan da Cunha Group | 37 24 S | 12 28 W | 13.500km NNW | 68 | (?) |
| D-502 | | 19.9.51 | | 18.5.57 | | Greenland | ca. 71 00 N | 40 00 W | 13.500km NNW | 68 | (?) |
| Schedule of Recoveries | | | | | | | | | | | |
| 44: Cape Gannet <i>Sula capensis</i> | | | | | | | | | | | |
| Mention does not seem to have been made of longevity in this species in either Broekhuysen & Liversidge (1961) or Jarvis (1971). Of the 272 recoveries on hand, 179 are of birds ringed as juveniles. It is interesting to note that up to June 1970 no recovery of any bird over 10 years after ringing has been made, (One has subsequently been recorded of 14 years and 3 months). This is surprising as in other sulids such as <i>S. bassana</i> , the average life expectancy of an adult is 16.2 years (Nelson, 1966) and in <i>S. sula</i> recoveries of 13 to 15 years are regular. However, the Cape Gannet ringing programme, one of the first large-scale ones in southern Africa, was marred by poor quality rings. These were quickly corroded or abraded and have been estimated rarely to have a 'life expectancy' of over five years. (Broekhuysen, pers. comm.). This allowed interesting results on movements to emerge but much remains to be discovered about longevity, using the hard-wearing rings available today. | | | | | | | | | | | |
| Lambert's Bay, Cape Province | 32 05 S | 18 17 E | | | | Lambert's Bay, Cape Province | 32 05 S | 18 17 E | 1.780km NNW | 8 | X |
| 657-01021 | Juv. | 2.68 | | 10.68 | | Kunene R. Mouth, S.W.A. | 17 20 S | 11 50 E | 1.780km NNW | 8 | X |

Waders

Interest has been growing in the migrations and other aspects of the ecology of palaeartic waders which, as migrants in South Africa, are probably out numbered only by the European Swallow *Hirundo rustica*. The only detailed wader study carried out so far is by Middlemiss (1961) on the Little Stint *Calidris minuta*. This report contains the first Ringed Plover *Charadrius hiaticula* recovery from France and a further Little Stint record from central Russia. To give some idea of the information on wader breeding grounds, the recoveries to date of palaeartic species have been given in Figure 2

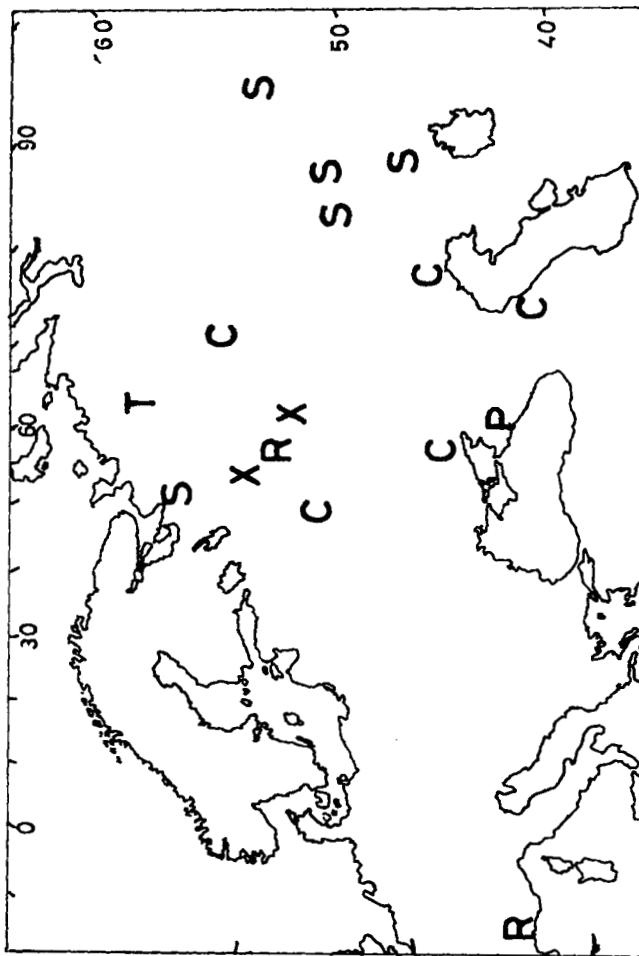

FIGURE 2

The sites of all European recoveries of palaeartic waders ringed in South Africa, up to 1 July 1968. R denotes Ringed Plover, C Curlew Sandpiper, T Terek Sandpiper, X Common Sandpiper, P Ruff, and S Little Stint.

| 316: Cape Turtle Dove <i>Streptopelia capicola</i> | | | | | | | | | | | |
| Considerable numbers of the commonest <i>Streptopelia</i> doves, <i>S. capicola</i> (3,500) and <i>S. senegalensis</i> (11,000) have now been ringed. As indicated in the 14th Ringing Report, these species are highly sedentary. However, interesting relative population figures have begun to appear at certain ringing sites. At Rondevlei (Middlemiss 1966) in the Cape, the relative numbers of <i>S. capicola</i> and <i>S. senegalensis</i> have undergone an almost complete reversal as shown in Fig. 3. | | | | | | | | | | | |
| The ousting of <i>S. capicola</i> by <i>S. senegalensis</i> may be a product of the suburbanisation of the area around Rondevlei. <i>S. senegalensis</i> also readily takes advantage of food put out by human residents. However, the results for 1967 to 1970 suggest that the <i>S. capicola</i> populations may again be on the increase. This could be a product of the development of the area and the growth of larger trees. Ringers should be on the look-out for similar phenomena elsewhere. | | | | | | | | | | | |

SUMMARY

This is the last report on bird-ringing to be presented by the South African Ornithological Society after 23-years of administering the Ringing Scheme. The totals of species ringed and recovered during the period 1 July 1968 to 30 June 1970 are given, and also details of about 850 recoveries or retraps made in the same period.

ACKNOWLEDGMENTS

During the period under review financial support was received from the S.A. Council for Scientific and Industrial Research. The National Zoological Gardens, Pretoria continued to receive and forward recovery reports to the Society and are thanked for this assistance. The funds for this publication were met by a special grant from the S.A.O.S. The Percy FitzPatrick Institute of African Ornithology deserves considerable gratitude for housing the Scheme during this period, for making its staff available for organizing the work, consulting, and for many other services. The National Bird-Ringing Unit allowed its Research Officer to spend some time working on the final manuscript draft. Thanks are extended to Messrs A. D. S. Hewitt, H. C. Hunter, A. J. Tree and Mr. P. Le S. Milstein, for help in checking the manuscript. Miss Sampson and Miss Hamilton were of assistance in the preparation of the typescript.
