

TWELFTH RINGING REPORT

G. R. McLachlan

Hon. Organiser Ringing

This report covers the period July 1st 1961 to June 30th 1962. The number of birds ringed is slightly higher than in the previous year but otherwise it was again a year of average activity.

On the recovery side, the most remarkable incident, probably the most interesting since the start of the scheme, was the finding of a European Stork, ringed as a nestling near Bredasdorp, at Tunduma on the southern border of Tanzania. Another long range recovery of interest is the Ringed Plover banded at Rondevlei and recovered in Russia near Genichesk. Other Russian recoveries include a Steppe Buzzard and several European Swallows.

This report is the first to include Latitude and Longitude references for all localities cited. This should assist readers not familiar with South Africa to find the smaller towns quoted in the recovery columns. As a result of this, bearing and distance readings are only given for recoveries over 50 miles.

The C.S.I.R. continued to render vital financial aid to the scheme while the National Zoological Gardens has continued the task of forwarding all recoveries to the Organiser. We are grateful to both these bodies and without their assistance the scheme could not continue.
