dieter@adu.uct.ac.za, mbrooks@adu.uct.ac.za*

This report covers recoveries reported to SAFRING from July 2003 to June 2004. The total number of species retrapped and recovered was 333 comprising 5338 records (4820 retraps and 518 recoveries). These retraps include birds retrapped one day later or any length after that.

The format is different this year. The species common and scientific names are listed, followed by the number of retraps and recoveries reported in the current ringing year, distance and the elapsed time (to the nearest month) between ringing and recovery.

Where a recovery has provided the greatest elapsed time or distance in the SAFRING databank, this is indicated in bold. First records for species are also indicated in bold, with a star next to the species number.
