

Cards may be obtained (free) from, and completed cards should be returned to: Moulting Enquiry, SAFRING, University of Cape Town, Rondebosch, 7700, South Africa. (When stocks are adequate, duplicates for private use may be purchased at the cost price current at time of application). In the light of large losses of unreturned cards experienced by the nest record card scheme, initially no more than 250 moulting cards will be supplied to any ringer. However, batches of completed cards may be returned at any time, whereupon further issues will be made as requested. At the end of a ringing year (1 July - 30 June), all ringers are requested to return any completed cards still in their possession at the same time as their ringing returns, in order that an annual summary of the progress of the moulting scheme can be prepared for publication in Safring News.

R. P. Prŷs-Jones, Percy FitzPatrick Institute of African Ornithology, University of Cape Town, RONDEBOSCH, 7700.

ERRATA

P. Le Roux has kindly drawn my attention to a couple of typographical errors that escaped detection during proof-reading of my paper 'Movements, mortality and the annual cycle of white-eyes in southern Africa' Safring News 14 (1): 25-35 (1985):

1. At the bottom of p. 26, the equation should read

$$1 - s = \frac{27}{76} = 0,355$$

2. The headings to columns 4 and 5 of Table 1, p. 28, should read $\mathcal{C}(d_x)$ and $d_x - \mathcal{C}(d_x)$ respectively. $\sum(d_x)$, given in error, is, of course, the summed total of column 4.

In addition, the first part of the penultimate sentence of the third paragraph on p. 25 should read:

"38 recoveries at a recovery rate of 0,36% imply ca 10 600 birds ringed;".
